

# Redline Market Data Distribution Solution

**Scale your existing platform to reach hundreds of remote clients at the same, with the lowest latency footprint**

The explosive growth in market data, combined with the need for many systems to have access to diverse subsets of the data, is posing serious challenges to traditional market data platforms. These solutions force you to adopt a distribution paradigm that may not fit your overall market data needs. Many market data distribution frameworks lack the performance and scalability required to service your applications in an acceptable manner. Few systems allow you to choose a distribution without tradeoffs in performance and scalability.

Redline's Market Data Distribution Solution changes the game with a choice of transport layers that enable you to distribute low-latency direct exchange market data to hundreds of endpoints, without the need to rewrite your applications. Whether you choose commercial or proprietary messaging middleware, Redline's distribution framework provides a deterministic, low-latency footprint without the need to trade speed for scalability.

## LEAD WITH SPEED

### PERFORMANCE

Wire-to-Client in as little as 5 microseconds

### SCALABILITY

Hundreds of connections for distributed applications

### FLEXIBILITY

Choose the transport layer that makes sense for your applications

### Distribution Options

- Composite market view
- Price-aggregated venues
- Full-depth order views
- User-defined baskets and filters

### Transport Options (TCP, Multicast, RDMA)

- Solace
- 29West
- Customer-specific

Redline's InRush™ Accelerated Ticker Plant seamlessly integrates into existing distribution architectures, enabling you to safeguard your investment while scaling to maximize your performance. InRush provides the same API on the ticker plant and for remote access, so you can run your trading applications without modification where and when you choose.

Redline provides leading-edge trading solutions that solve the toughest latency and throughput challenges in today's demanding markets.
